

Overview**Method Name**

Direct Radioimmunoassay (RIA)

NY State Available

No

Specimen**Specimen Type**

GI Plasma

Specimen Required**Container/Tube:**Special tube containing G.I. preservative (MCL Supply T125)**Specimen Volume:**3 mL**Collection Instructions:**

1. Patient should fast for 10 to 12 hours prior to collection.
2. Collect 10 mL of blood in special tube.
3. Specimen should be separated immediately and plasma frozen as soon as possible.

Additional Information: Antacid medications and medications that affect intestinal motility should be discontinued, if possible, for at least 48 hours prior to collection.**Specimen Minimum Volume**

1 mL

Reject Due To

Hemolysis	NA
Lipemia	NA
Icterus	NA
Other	Anything other than required G.I. Tube

Specimen Stability Information

Specimen Type	Temperature	Time	Special Container
GI Plasma	Frozen	30 days	

Clinical and Interpretive

Clinical Information

Cholecystokinin is a 33 amino acid peptide having a very similar structure to Gastrin. Cholecystokinin is present in several different sized forms including a 58 peptide Pro-CCK and 22, 12, and 8 peptide metabolites. The octapeptide retains full activity of the 33 peptide molecule. Cholecystokinin has an important physiological role in the regulation of pancreatic secretion, gallbladder contraction and intestinal motility. Cholecystokinin levels are elevated by dietary fat especially in diabetics. Elevated levels are seen in hepatic cirrhosis patients. Cholecystokinin is found in high levels in the gut, in the brain and throughout the central nervous system.

Reference Values

Up to 80 pg/mL
